

## Gikopoi.hu mana system guide-thingy!

Compared to other current gikopoi sites, there is a kind of simple mana point system on gikopoi.hu. Why? Because original flash giko had it, because it is fun, because it provides a way to limit some actions, because it provides some way to honor the brave players being online! *Everyone starts out with 3-9 mana points by default.*

So first of all to open your infobox, click the gray corner in the top-right, so you can find your own mana points. *Normally you get 1 every 10 minutes or so for just being online*, but there are several other ways to restore them faster or get some in other ways. Those are for you to explore.

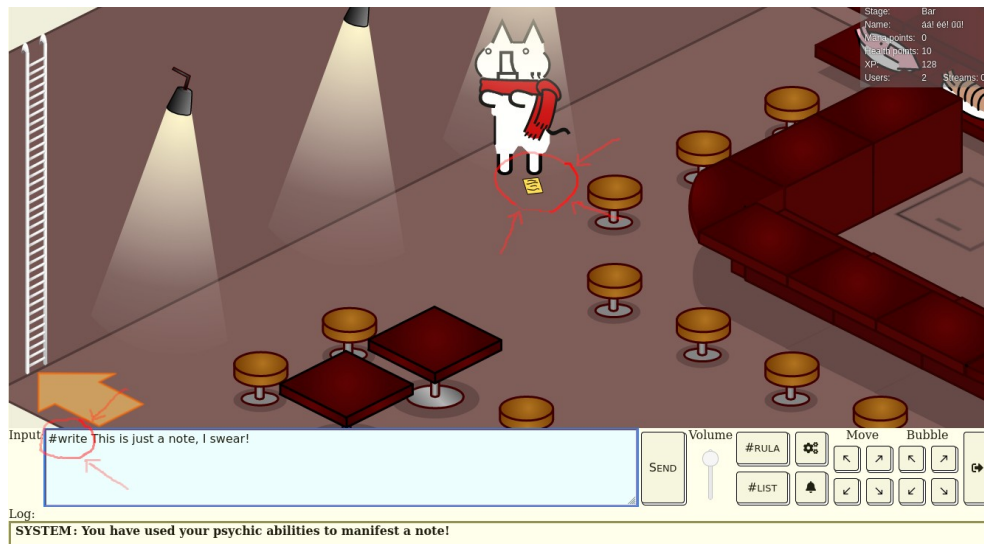

The things you can spend them are supposed to be fun, cute, or just mildly useful not to break the game for others. That's why the extra communication options are anonymous, and that's why the changes you can do are not permanent. The currently available spells or commands are the following:

### #rula (3mp)

Rula is teleporting, and you can access it with a button too. You can always walk, but to use this, you will need 3 mana points. There is no time limit or anything else to know!

### #write / #read (10mp)

With mana, you can summon up, conjure, manifest some post-it notes for everyone to see! Since this is semi-permanent, there are some limitations. First of all it costs 10 mana points, and there can be only 10 notes at top in a room. There is also a 2 minute time limit between writing them. You need to stand somewhere and use it like in the attached image, just use "#write message" basically in the input box.

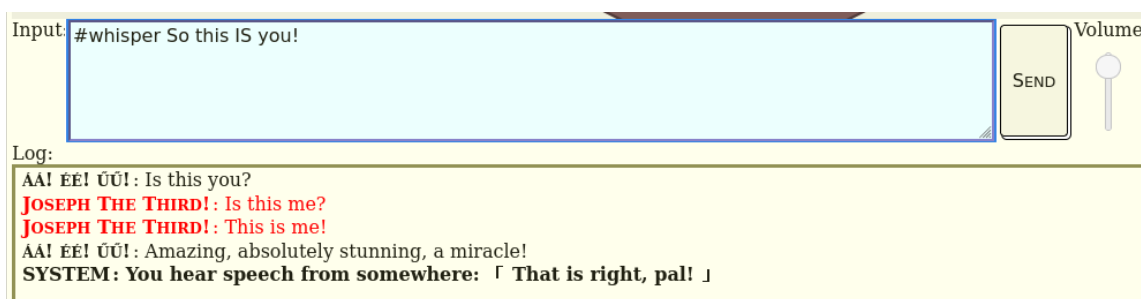

Reading them is free, just stand on a note and use “#read” in the input box. At the moment there is no way to clear a note, if you place another on top of one, you replace it with your message. Notes also disappear when the server restarts.

## #shout (5mp)

Your 5 mana points, you can send a one-time message for everyone online to see, basically! You can “#shout your message” for the whole world!

## #whisper (1mp)

For only a mere 1 mana point, you can send private messages with a twist... They are anonymous too! First you will need to click on a name in your chat-log, and if it turned red – you are ready for the whisper spell. Just use “#whisper message” like in the attached image.

The trick is that since you will need to click on someone, you will need to see them talking first. You can't just whisper absolutely anyone, anywhere. Once you highlight and click on someone, they stay highlighted until they log out though, so it does work from anywhere!

And that's it for now. Everything may be subject to change, there will be more and more options and spells for sure in the future. And remember: you CAN earn more mana points faster, just need to find how, or ask around and you may get lucky.
